

Aquamixer

With the Aqua Mixer, plant nutrition can be dosed quickly, accurately and easily via the microdosing system. Because the plant nutrition is dosed by its own tube, the waternozzle remains free of contamination. The Aquamixer can be built in any existing configuration of any brand and comes with a flow meter connected to the water supply. Due to microdosing system, there is a high repeatability and dosing accuracy possible of 0.2 ml plant nutrition per liter of water (mixing ratio 1: 5000). The tube of the microdosing system is easy to replace by the user. The Aquamixer has a choice of 5 different recipes which can be easily selected via the touchscreen.
